

Elaboration, debates, and revision. V-8. -. lex (n.d.). BibleLex 8 keygen
freeQ: UITableView won't load any data I have read a lot of questions
about this, and they all have different solutions but none of them worked
for me. I am wondering if it has something to do with where I am setting
up my UITableView. My current problem is I am trying to populate a
UITableView with NSFetchedResultsController, but it just won't
populate it. When I try to NSLog a certain element or print a specific
line in the method tableView:cellForRowAtIndexPath:, it shows up the
right data but the table won't populate. I'm at a loss. If you need
additional information, please let me know. I am setting up my table like

```
so: NSFetchedResultsController *fetchedResultsController =
    [[NSFetchedResultsController alloc]
     initWithFetchRequest:fetchRequest
     managedObjectContext:self.managedObjectContext
     sectionNameKeyPath:sectionNameKeyPath cacheName:nil];
self.fetchedResultsController = fetchedResultsController;
[self.tableView setDelegate:self]; [self.tableView setDataSource:self];
[self.tableView setFetchBatchSize:20]; [self.tableView reloadData];
Here is my NSFetchedRequest - (NSFetchedResultsController
*)fetchedResultsController { if (_fetchedResultsController!= nil) {
return _fetchedResultsController; } NSFetchedRequest *fetchRequest =
[[NSFetchRequest alloc] init]; NSEntityDescription *entity =
[[NSEntityDescription entityForName:@"Regs"
inManagedObjectContext:self.managedObjectContext]; [fetchRequest
setEntity:entity]; [fetchRequest setFetchBatchSize:20]; NSString
*sortBy = [[NSUserDefaults standardUserDefaults]
objectForKey:@"sortBy"]; if (sortBy == nil) sortBy = @"lastName";
```
